LEGER'S WEEKLY SURVEY

PRESENTED BY

Leger

A C S • A E C

Association for Canadian Studies • Association d'études canadiennes

August 3rd, 2020

Leger

METHODOLOGY

METHODOLOGY

Leger - the largest Canadian-owned polling and marketing research firm – conducted this Web survey with a representative sample of **1,531 Canadians and 1,001 Americans**, over the age of 18, selected from LEO's (Leger Opinion) representative panel. The questionnaire consisted of 25 questions and was completed in 10 minutes on average. Data collection took place between **July 31 and August 2, 2020**, via Computer-Assisted Web Interviewing technology (CAWI). Using 2016 Census reference variables, the data was then analyzed and weighted by our statisticians according to gender, age, language spoken, region, education level and the presence of children in households in order to render a representative sample of the general population.

The LEO (Leger Opinion) panel is the largest Canadian panel with over 400,000 representative panelists from all regions of Canada. LEO was created by Leger based on a representative Canadian sample of Canadian citizens with Internet access. LEO's panelists were randomly selected (RDD) through Leger's call centre, panelists from more hard-to-reach target groups were also added to the panel through targeted recruitment campaigns. The double-opt-in selection process, a model to detect fraud and the renewal of 25% of the panel each year ensures complete respondent quality. To ensure a higher response rate and reach people on their mobile devices, Leger has also developed a high-performance Apple and Android application. In fact, Leger is the only Canadian research firm offering both the number and quality of panelists. Most competing polling firms in Canada and the United States also use the LEO panel.

A margin of error cannot be associated with a non-probability sample in a panel survey. For comparison purposes, a probability sample of this size would have a margin of error $\pm 2.5\%$, **19 times out of 20** for the Canadian sample and of $\pm 3.1\%$, **19 times out of 20** for the American sample. The results presented in this study comply with the public opinion research standards and disclosure requirements of CRIC (the Canadian Research and Insights Council) and the global ESOMAR network. Leger is a founding member of CRIC and is actively involved in raising quality standards in the survey industry. President Jean-Marc Léger is a member of the CRIC's Board of Directors and the Canadian representative of ESOMAR.

Leger is the polling firm that has presented the most accurate data, on average, over the last ten years in Canada. During the last federal election in 2019, Leger was once again the most accurate firm in the country. This accuracy is attributed to the quality of the LEO panel and rigorous application of methodological rules by Leger's 600 employees, including 200 professionals in Leger's eight offices across Canada (Montreal, Toronto, Quebec City, Winnipeg, Calgary, Edmonton and Vancouver) and in the United States (Philadelphia).

Poll aggregator 338Canada.com gave Leger the highest rating among all polling firms in Canada for the accuracy of its studies. See <https://338canada.com/pollster-ratings.htm>

Federal Elections 2019		
Federal Parties	Leger Survey	Official Results
LPC	33%	33%
CPC	33%	34%
NDP	18%	16%
BQ	8%	8%
Green	6%	7%
PPC	2%	2%

METHODOLOGY

Notes on Reading this Report

The numbers presented have been rounded up. However, the numbers before rounding were used to calculate the sums presented and might therefore not correspond to the manual addition of these numbers.

In this report, data in bold **red** characters indicate a significantly lower proportion than that of other respondents. Conversely, data in bold **green** characters indicate a significantly higher proportion than that of other respondents.

A more detailed methodology is presented in the appendix.

If you have questions about the data presented in this report, please contact Christian Bourque, Associate and Executive Vice-President at the following e-mail address: cbourque@leger360.com or Jack Jedwab, President & CEO of the Association for Canadian Studies: jack.jedwab@acs-aec.ca

IN THE NEWS
WE CHARITY SCANDAL

IMPACT OF THE WE CHARITY SCANDAL

CTC217. As you may have read, heard or seen, there has been some controversy over the rewarding of a federal government contract to a charitable organization called WE Canada. Concerns regarding conflict of interest involving the Prime Minister and the Finance Minister have been made and, subsequently, the contract with WE has been cancelled.

How has this issue affected your view of...

Base: All respondents (n=1,531)

SHOULD THERE BE AN ELECTION?

CTC219. The Government's Ethics Commissioner is investigating to determine if the Prime Minister was in violation of the ethics code governing his conduct as an elected official as it related to the WE issue. If he is found to be in violation on this issue, it will be the third time he has been found to have violated the proper ethical conduct of an elected official.

If Justin Trudeau is found guilty of breaching the ethical code of conduct, should there be an election so the people of Canada can decide if Justin Trudeau is fit to continue as Prime Minister?

Base: All respondents (n=1,531)

ANNEXES

DETAILED METHODOLOGY

Weighted and Unweighted Sample

The table below presents the Canadian geographic distribution of respondents before weighting.

Province	Unweighted	Weighted
British Columbia	152	208
Alberta	142	172
Manitoba/Saskatchewan	125	100
Ontario	611	588
Quebec	401	359
Atlantic	100	105

The table below presents the American geographic distribution of respondents before weighting.

US region	Unweighted	Weighted
NorthEast	198	179
MidWest	192	217
South	323	371
West	288	233

DETAILED METHODOLOGY

Weighted and Unweighted Sample for Canada

The following tables present the demographic distribution of respondents according to gender, age and language (mother tongue) for Canada.

GENDER	Unweighted	Weighted
Male	791	744
Female	740	787

AGE	Unweighted	Weighted
Between 18 and 34	399	418
Between 35 and 54	497	522
55 or over	635	592

LANGUAGE (MOTHER TONGUE)	Unweighted	Weighted
English	396	318
French	918	997
Other	214	213

The sample thus collected has a minimum weighting factor of 0.0811 and a maximum weighting factor of 4.3844. The weighted variance is 0.3486.

DETAILED METHODOLOGY

Weighted and Unweighted Sample for The United States

The following tables present the demographic distribution of respondents according to gender and age for The United States.

GENDER	Unweighted	Weighted
Male	498	485
Female	503	516

AGE	Unweighted	Weighted
Between 18 and 29	151	220
Between 30 and 39	210	172
Between 40 and 49	127	186
Between 50 and 64	293	250
65 or older	220	172

The sample thus collected has a minimum weighting factor of 0.4542 and a maximum weighting factor of 3.2955. The weighted variance is 0.2683.
