Survey of Canadians

THE
CANADIAN
PRESS

DATE 2024-02-05

Methodology

Method

Online survey among respondents 18 years of age or older.

(Canadian sample: n= 1,614).

Respondents had the option of completing the survey in English or in French and were randomly recruited using LEO's online panel.

When

February 2 to February 4, 2024

Margin of error

For comparison purposes, a probability sample of this size yields a margin of error no greater than $\pm 2.44\%$, (19 times out of 20) for the Canadian sample.

Weighting

Results were weighted according to **age, gender, mother tongue, region, education and presence of children in the household** in order to ensure a representative sample of the Canadian population.

Methodology

Significant differences

Data in bold **red** characters indicate a significantly lower proportion than that of other respondents. Conversely, data in bold **green** characters indicate a significantly higher proportion than that of other respondents.

Rounded data

The numbers presented have been rounded up. However, the numbers before rounding were used to calculate the sums presented and might therefore not correspond to the manual addition of these numbers.

Questions

Have questions about the data presented in this report? Please contact Christian Bourque, Executive Vice-President, Eastern Canada at the following e-mail addresses: cbourque@leger360.com

A more detailed methodology is presented in the Appendix.

Methodology

Leger is the polling firm that has presented the most accurate election survey data, on average, over the last ten years in Canada. During the last federal election in 2021, Leger was once again **the most accurate firm in the country**. This accuracy is attributed to the quality of the LEO panel and rigorous application of methodological rules by Leger's 600 employees, including 200 professionals in Leger's eight offices across Canada (Montreal, Toronto, Quebec City, Winnipeg, Calgary, Edmonton and Vancouver) and in the United States (New York).

Poll aggregator 338Canada.com gave Leger the highest rating among all polling firms in Canada for the accuracy of its studies. See <https://338canada.com/pollster-ratings.htm>

Key Highlights (1/2)

From February 2 to 4, 2024, we surveyed Canadians to find out their opinion and perceptions on the usage of AI tools and their impact on society.

Some of the key highlights of our survey about AI tools include...

The Use of Artificial Intelligence Tools Is on the Rise

- A third (30%) of Canadians use artificial intelligence tools, whether for work or school (15%) or in a personal context (22%). This represents a 5-point increase since February 2023 (25%). Canadians aged 18 to 34 (68%) are more likely to use AI tools.
- Among those who have used AI tools, 71% rate their experience as excellent (16%) or good (55%), versus 29% who had a negative experience.
- Three quarters of Canadians (76%) have used the free version of ChatGPT (ChatGPT3), and 15% have used its paid version (ChatGPT4).
- Content creation tools that generate text, images, and videos (i.e., ChatGPT) are becoming more familiar. A third of Canadians (32%) say they are familiar with these tools, a significant increase since 2023 (25%).

Key Highlights (2/2)

Growing Caution Among Canadians Towards AI Tools

- Nearly a third of Canadians (31%) think AI tools are good for society, while almost the same proportion (32%) believe they are bad, and 37% are unsure. There is a significant increase in people who believe AI tools are bad for society, rising from 25% in 2023 to 32% in 2024.
- Eight out of ten Canadians (81%) worry society will become too dependent on these tools, and the same proportion (81%) have privacy concerns.
- Compared to 2023, there's an 11-point increase in Canadians who think AI tools may become so powerful they can outsmart or outthink humans (63% in 2024 versus 52% in 2023) and a 5-point increase in Canadians who believe AI tools will threaten human jobs (75% in 2024 versus 70% in 2023).
- The biggest concerns Canadians have about AI tools are the lack of emotion and empathy (22%), the fear that society will become too dependent on these tools (20%), and the threat to human jobs (16%).
- 80% of Canadians currently employed believe AI tools will impact their work in the next year, with nearly a third (29%) believing it will have a significant impact.
- More than half of Canadians trust AI tools for completing tasks at home (58%), using face recognition or other biometrics to access personal information (53%), or answering questions about a product or service on a website via chat (50%). Other uses, like teaching your child(ren) (15%), finding a life partner online (18%), transporting you from one place to another without a driver (23%), or answering clinical, health, or medical questions for you or your family (30%) receive less trust from Canadians.

Our Commitments to Quality

Leger is a member of the [Canadian Research Insights Council \(CRIC\)](#), the industry association for the market/survey/insights research industry.

Leger is a member of [ESOMAR](#) (European Society for Opinion and Market Research), the global association of opinion polls and marketing research professionals. As such, Leger is committed to applying the [international ICC/ESOMAR](#) code of Market, Opinion and Social Research and Data Analytics.

Leger is also a member of the [Insights Association](#), the American Association of Marketing Research Analytics.

Leger is a sponsor of [CAIP Canada](#), Canada's professional body for Certified Analytics and Insights Professionals who uphold CRIC's marketing research and public opinion research standards. CAIP Canada is globally endorsed by ESOMAR and the MRII/University of Georgia.
