Leger

WEEKLY SURVEY

November 16th, 2020

THE CANADIAN PRESS

ACS · AEC

METHODOLOGY

Leger,the largest Canadian-owned polling and marketing research firm, in collaboration with the Canadian press, conducted this Web survey with a representative sample of **1,522 Canadians and 1,003 Americans,** over the age of 18, selected from LEO's (Leger Opinion) representative panel. The questionnaire consisted of 25 questions and was completed in 10 minutes on average. Data collection took place from **November 13th to November 15th, 2020**, via Computer-Assisted Web Interviewing technology (CAWI). Using 2016 Census reference variables, the Canadian data was then analyzed and weighted by our statisticians according to gender, age, mother tongue, region, education level and the presence of children in households in order to render a representative sample of the general population. Using 2010 U.S. Census reference variables, the American data was then analyzed and weighted by our statisticians according to gender, age, region, race/ethnicity, household size and education level in order to render a representative sample of the general population.

The LEO (Leger Opinion) panel is the largest Canadian panel with over 400,000 representative panelists from all regions of Canada. LEO was created by Leger based on a representative Canadian sample of Canadian citizens with Internet access. LEO's panelists were randomly selected (RDD) through Leger's call centre, panelists from more hard-to-reach target groups were also added to the panel through targeted recruitment campaigns. The double-opt-in selection process, a model to detect fraud and the renewal of 25% of the panel each year ensures complete respondent quality. To ensure a higher response rate and reach people on their mobile devices, Leger has also developed a high-performance Apple and Android application. In fact, Leger is the only Canadian research firm offering both the number and quality of panelists. Most competing polling firms in Canada and the United States also use the LEO panel.

A margin of error cannot be associated with a non-probability sample in a panel survey. For comparison purposes, a probability sample of this size would have a margin of error **±2.51%, 19 times out of 20** for the Canadian sample and of **±3.09%, 19 times out of 20** for the American sample. The results presented in this study comply with the public opinion research standards and disclosure requirements of CRIC (the Canadian Research and Insights Council) and the global ESOMAR network. Leger is a founding member of CRIC and is actively involved in raising quality standards in the survey industry. President Jean-Marc Léger is a member of the CRIC's Board of Directors and the Canadian representative of ESOMAR.

Leger is the polling firm that has presented the most accurate data, on average, over the last ten years in Canada. During the last federal election in 2019, Leger was once again the most accurate firm in the country. This accuracy is attributed to the quality of the LEO panel and rigorous application of methodological rules by Leger's 600 employees, including 200 professionals in Leger's eight offices across Canada (Montreal, Toronto, Quebec City, Winnipeg, Calgary, Edmonton and Vancouver) and in the United States (Philadelphia).

Poll aggregator 338Canada.com gave Leger the highest rating among all polling firms in Canada for the accuracy of its studies. See https://338canada.com/pollster-ratings.htm

METHODOLOGY

Notes on Reading this Report

The numbers presented have been rounded. However, the numbers before rounding were used to calculate the sums presented and might therefore not correspond to the manual addition of these numbers.

In this report, data in bold **red** characters indicate a significantly lower proportion than that of other respondents. Conversely, data in bold **green** characters indicate a significantly higher proportion that that of other respondents.

A more detailed methodology is presented in the appendix.

If you have questions about the data presented in this report, please contact Christian Bourque, Associate and Executive Vice-Present at the following e-mail address: cbourque@leger360.com or Jack Jedwab, President & CEO of the Association for Canadian Studies: jack.jedwab@acs-aec.ca

EFFICIENCY OF THE VACCINE

CTC432. Based on what was reported on this vaccine by Pfizer that is going through final stages of testing, it is expected to be efficient 90% of the time (that is it would adequately protect 9 out of 10 people who receive it). Do you feel that this 90% efficiency is sufficient for you to take the vaccine once available in the Spring?

Base: All respondents (n=1,522)

APPENDIX

DETAILED METHODOLOGY

Weighted and Unweighted Sample

The table below presents the Canadian geographic distribution of respondents before weighting.

Province	Unweighted	Weighted
British Columbia	151	206
Alberta	125	171
Manitoba/Saskatchewan	126	99
Ontario	607	584
Quebec	413	357
Atlantic	100	104

The table below presents the American geographic distribution of respondents before weighting.

US region	Unweighted	Weighted
NorthEast	162	180
MidWest	236	218
South	346	372
West	259	234

DETAILED METHODOLOGY

Weighted and Unweighted Sample for Canada

The following tables present the demographic distribution of respondents according to gender, age and language (mother tongue) for Canada.

GENDER	Unweighted	Weighted
Male	709	739
Female	819	783

AGE	Unweighted	Weighted
Between 18 and 34	376	409
Between 35 and 54	445	525
55 or over	701	588

LANGUAGE (MOTHER TONGUE)	Unweighted	Weighted
English	957	1,004
French	361	317
Other	204	202

The sample thus collected has a minimum weighting factor of 0.1767 and a maximum weighting factor of 4.6248. The weighted variance is 0.3938.

DETAILED METHODOLOGY

Weighted and Unweighted Sample for The United States

The following tables present the demographic distribution of respondents according to gender and age for The United States.

GENDER	Unweighted	Weighted
Male	483	486
Female	520	517

AGE	Unweighted	Weighted
Between 18 and 29	182	192
Between 30 and 39	187	201
Between 40 and 49	167	187
Between 50 and 64	274	251
65 or older	193	173

The sample thus collected has a minimum weighting factor of 0.2102 and a maximum weighting factor of 3.0222 The weighted variance is 0.1669.
